PROFILE

A third-year Computer Science student at Holon Institute of Technology (HIT) with a 90 GPA. Passionate about software development and IT. I enjoy building things, solving complex challenges, and constantly learning new technologies. I'm a curious person who loves to explore, grow, and learn something new every day. To further expand my skills, I also completed an online HTML5 and CSS, JS, React courses.

Naval frontline combat soldier in the Missile Boat Fleet. Maritime navigator and Command Bridge station officer, responsible for naval navigation systems.

PROJECTS

Delivery Route Optimization App:

Developed a smart algorithm for real-time multi-order delivery optimization during a 2-day hackathon, outperforming common market solutions. The algorithm scores orders based on urgency and proximity using live data from the Google Maps API. Currently, we're expanding it into a full-scale product.
